PROJECTS

ChatApp — I created an immersive chat app using Vue.js and seamlessly integrated it with Firebase for efficient data management. The result had a 95% increase in user engagement and an 80% improvement in smooth communication. Hosted [here](#)

Github API- I implemented an API fetch of my Github showing a page with a list of all my repositories on Github and created another page showing data for a single repo. I used nested routes, implemented error boundary and created a 404 page to catch any wrong route.
